

Did you know that ageing starts from the day you were born?

As people get older there is greater deterioration in their body including the ability to repair skin. In general terms, the skin cell is weaker and less healthy.

Maintaining a youthful appearance requires a lifetime of care; there are no shortcuts!

The skin becomes fragile, increases in laxity, becomes wrinkled, wound healing slows down and pigmentation is increased. Further ageing occurs with our stressful lifestyle, polluted environment, smoking, drinking excessive alcohol, wrong diet and UVA/UVB rays.

Regular skin care is important but what do you do about the existing damage? Our microdermabrasion is a medical treatment that improves and can eliminate certain skin conditions and imperfections including acne scarring, enlarged pores, aging skin, pigmentation, sun damage, fine lines and wrinkles.

This treatment works by removing the top layer of inactive skin which stimulates new cell growth leaving luminous, younger looking skin.

BEAUBELLE products and therapies merge the riches of nature with the most advanced in derma-cosmetic science. It's approach to skin care has two primary goals. One, to treat the problem at hand in the short term, and two, to eliminate the problem at its source by

fortifying at the cellular level to support your body's natural ability to renew, relax, rebalance and revive itself unlike other alternates available in the market which are short term solutions and may have side effects

We know everyone's skin is different, so before prescribing your treatment we'll consult your medical history, consider your needs and lifestyle and only then, provide you with a program that's designed SPECIFICALLY FOR YOU.

We'll advise you on day-to-day skin maintenance, after treatment care and recommend the best products for your skin.

Facial Peels

AHA – (Alpha Hydroxy Acid)

AHA is a superficial peel designed to resurface the top layer of the skin. This reduces pigmentation, blocked pores, fine lines and mild irregularities on the skin, while stimulating collagen growth. AHA helps to make the skin healthy and is a great maintenance facial to keep that healthy glow.

Suitable for all skin types. Not for pregnant clients.

Microdermabrasion

Microdermabrasion (medical grade) uses an abrasive crystal head to exfoliate the upper layers of the skin. This helps improve acne scarring, pigmentation, stretch marks, enlarged pores and other mild irregularities on the skin, while stimulating collagen growth. Microdermabrasion leaves the skin clearer, smoother and healthier.

Suitable for all skin types except cystic acne. Can be done on pregnant clients.

Dermasweep

A microdermabrasion with a skin specific topical infusion. The Dermasweep applies the solution under vacuum pressure at the same time the system exfoliates the upper layer of the skin. A very effective treatment that addresses each clients' unique skin care needs.

Dermasweep helps improve blocked pores, scarring, enlarged pores, pigmentation and other mild irregularities on the skin, while stimulating the collagen growth. This makes the skin healthier.

Suitable for all skin types except for cystic acne. Can be done on pregnant clients

*The AHA, Microdermabrasion and the Dermasweep are all preparation for other treatments e.g. – IPL photorejuvenation, skin needling, Jessner's peels, TCA peels, etc.

They are also a great way to maintain that glow and healthy skin.

Jessner's Peel

Jessner's Peel is a peel designed to resurface the top layer of the skin. It goes deeper into the skin than AHA, microdermabrasion, etc. It is especially effective in treating skin pigmentation, congestion and breakouts due to its ability to dissolve dead skin cells and oil in the pores. A series of preparation facials are recommended before these peels to achieve the best result and minimise down time.

Has down time of 7–10 days.

Suitable for cystic acne, oily skin, darker skin types, skin types III, IV and V. Not suitable for pregnant clients.

TCA Peels

TCA (Trichloroacetic acid peel) peel is a peel designed to resurface the top layer of the skin. It also goes deeper into the skin than AHA, microdermabrasion, etc. This is especially effective for age spots, pigmentation, sun damage, fine lines and rough textured skin.

A series of preparation facials are recommended before these peels to achieve the best result and minimise down time.

Has a down time of 7–10 days

Suitable for sun damaged skin type I and II. Not suitable for pregnant clients.
