

## Dramatic results

### IPL™ Skin Treatments using Photorejuvenation

Your skin is the outfit you wear everyday

The remarkable new Intense Pulsed Light improves the appearance:

- Photo-aged skin on face and body
- Treat broken capillaries
- Stimulates the growth of collagen
- Brown pigmentation and aged spots (sun-induced freckles)
- With no down time, creates smoother looking skin through a process of Photorejuvenation

Non-laser Photorejuvenation is far more effective than creams, medications or conventional lasers. We now offer this treatment at Beubelle Beautyclinic.

### What is Intense Pulsed Light?

Intense Pulsed Light (IPL™) technology is a treatment breakthrough that can correct a variety of benign skin conditions, such as facial skin imperfections, the signs of photo-aging, birthmarks, unwanted hair, unsightly small veins and other blemishes.

It offers a safe, non-invasive solution that can be tailored to your individual condition and skin type, providing superior cosmetic results and outstanding satisfaction, through a new process called Photorejuvenation.

IPL™ Photorejuvenation  
for face and body

### How is Photorejuvenation performed?

A cold gel is usually applied to the area to be treated, and you may have to wear eye pads to protect your eyes from the bright light. The smooth glass surface of the IPL™ handpiece is gently applied to your skin and pulses of light are applied. You may feel a slight sting, like the snapping of a small rubber band. An anaesthetic cream may be used, but is seldom required. Treatment is generally administered in a series of 4 to 6 sessions that provide excellent long-term results, minimal adverse effects and high satisfaction. Each treatment takes about twenty minutes.

### IPL™ at work

Red blemishes from broken blood vessels and brown spots of pigment from sun damage respond to Intense Pulsed Light. The light is changed to heat energy as it reaches to the level of the collagen beneath the skin surface.

### Why are multiple treatments necessary?

Depending on the number of conditions you are treating, and the severity of the individual problem, a series of four to six treatment sessions may be recommended. You can return to work the same day and resume all your regular activities.

By dividing the full program into several treatments, the procedure provides gradual improvement with very low risk – and, it preserves the wonderful 'no down time' feature that people appreciate so much.

### How do other treatments compare?

While there are lasers that treat telangiectasia and broken capillaries, other lasers that treat benign brown pigments and others yet that are used for resurfacing facial skin, no technology provides the long-term improvement of complexion and texture of the IPL™ Skin Treatments using Photorejuvenation program – all without the slightest interruption in your busy lifestyle.

### What conditions can Photorejuvenation treat?

#### Imperfections from Sun Damage and Photo-aging

Facial imperfections or abnormalities can detract from your well being and appearance, no matter how healthy and young you feel. IPL™ technology helps create smoother-looking skin. After a series of treatments, you can see a significant reduction of unwanted **pigmentation**. The same treatment can be used effectively on the neck, chest, arms and hands

#### Redness Caused by Broken Capillaries

Many people suffer from broken capillaries and diffuse erythema, that cause them social embarrassment. For both women and men, IPL™ can successfully treat dilated blood vessels without injuring the surrounding healthy skin.

#### Benign Vascular Lesions: Broken Veins and Capillaries

The face has an extensive network of veins and tiny blood vessels called capillaries. Over time, aging, trauma, sun exposure, and certain lifestyle factors cause a number of them to break appearing as red streaks or blotches on the face. IPL™ therapy can eliminate damaged veins and capillaries by removing virtually all traces of these unsightly blemishes.

Photo-aging – after 4 IPL™ treatments

Telangiectasia – after 3 IPL™ treatments

Broken capillaries – after 2 IPL™ treatments
